

Global health

Every day Novartis work towards solutions to the global health challenges patients and healthcare professionals across the world face on a daily basis. We apply our expertise and full organisational capability to address major, unresolved global health challenges.

Patient-first approach

We prioritise the needs of patients, their families and communities, finding innovative ways to overcome barriers to sustainable healthcare delivery.

Disease-focused innovation

We focus our scientific expertise to deliver medicines and healthcare solutions, targeting disease areas where we can transform lives.

Healthcare for underserved populations

We work to make medicines and healthcare solutions accessible, irrespective of geography, income or local health system limitations.

Health systems strengthening

We work with multiple stakeholders to improve healthcare provision and create new opportunities for medical innovation to benefit lower-income populations.

Partnering with commitment

We engage for the long term, working with partners and communities to bring complementary expertise and integrated solutions to address global health.

Listening to society

We listen to what society expects from us and use the insights to determine where we focus, and how we can deepen our role as a responsible citizen.

Ensuring impact

Our programs are designed using rigorous goal-setting methodologies to ensure we measure and deliver true societal impact.
